

BACKWARDS IN EVOLUTION

VIRTUALLY EVERYTHING THAT I'VE BEEN TELLING YOU ABOUT THE ENERGY IN THE GAP/GOD'S ENERGY, IS FURTHER PROVEN HERE IN THE ATTACHED PATENTED PROCESS. FROM IMPROVING PLANT PERFORMANCE TO KEEPING FISH FARMS HEALTHY AND CHANGING THE GENOME BACK TO GOD'S ORIGINAL IDEA. AND IT IS SO EASY AND INEXPENSIVE - A SIMPLE CAPACITOR HOOKED TO NEARLY ANY BATTERY WILL DO IT.

THE RESULTING ELECTROSTATIC FIELD IS JUST THAT, STATIC - NOT MOVING. BUT IT ENHANCES THE GAP ENERGY - THE GAP ENERGY BEING GOD AS EXPLAINED IN THE ATTACHED GENETIC LOGIC PAPER.

AS POINTED OUT IN GENETIC LOGIC - DNA DIFFERENTIATION IS CAUSED BY THE MORPHIC FIELD I.E. TORROIDAL FIELD (3-D) VS. THE ANU (2-D). THE ATTACHED EXPERIMENT BASICALLY PROVES THAT. AND, THERE IS ANOTHER EXPERIMENT THAT I HAVE - A UNIVERSITY STUDENT IN CHINA TOOK A DUCK EGG AND A CHICKEN EGG BOTH HAVING BEEN FERTILIZED - HE THEN DIRECTED A MICRO-WAVE TRANSMITTER AT THE DUCK EGG WITH THE CHICKEN EGG BEING JUST PAST THE DUCK EGG - THE CHICKEN GREW UP WITH A DUCK'S BILL AND WEB FEET - THUS THE INFORMATION IN THE FIELD AROUND THE DUCK EGG WAS TRANSMITTED TO THE CHICKEN'S EGG!!! THE INFORMATION FOR WEB FEET AND A BILL DID NOT YET EXIST IN THE UNDIFFERENTIATED DNA IN THE DUCK EGG - BUT, IT DID OBVIOUSLY EXIST IN THE FIELD AROUND THE DUCK EGG AS THE GENETIC LOGIC ESSAY POINTS OUT WITH LEAD PIPE LOGIC.

BLESSINGS,

Finally the Ciba Geigy Research including patent is translated into English.

Best wishes ***

In 1989 the chemical giant Ciba-Geigy had registered a patent (number 0351357) for a way to cultivate original forms of plants and animals using simple electrostatic fields. The patent is simply called "Improved Cultivation Technique", and the farther-reaching effects were not mentioned in the patent papers, but the basic experimental design remains.

Ciba-Geigy then retired this technique, perhaps because it had too many "disadvantages" for a chemical conglomerate. The original forms of plants are much more resistant than all of today's hybrids. These plants need neither fertilisation nor chemical additives. But this is a guess, then the actual reasons could go much further (due to the gigantic possibilities this technique offers).

The experimental design: For three days, the seeds of a plant are laid out to germinate between two aluminium plates that are hooked up to a DC source. Then they are put in the soil in the normal way. In this way, within three days in the electrostatic field, the "Wurm" fern with 36 chromosomes transmutes to the "Hirschzungen" fern with 41 chromosomes! In the ensuing four years, the newly-formed "Hirschzungen" fern (actually only known in petrified form from old coal deposits) mutated into many possible fern varieties: "Wurm" ferns, "Buchen" ferns, South-African "Leder" ferns,

"Hirschezungen" ferns (as you can see we have a lack of correct terms here and also a little further down below - please help us out if you are a biologist or someone who would win the 1 Million Dollar show!) and others. At this point the researchers asked themselves whether the information for the shape of a living being was actually stored in the genes, or whether the electrostatic charge of the atmosphere was not a factor that co-determines the complete information in Nature. The new/old ferns showed further unbelievable abilities. Normal ferns form only one "Vorpflanze" capable of reproduction per leaf. The others simply fall off. But the original fern develops a kind of duct network between all "Vorpflanzen". Extremely thin, silvery, straight channels go from the leaf tip straight to the next "Vorblatt". Thus the plant increases manifold its ability to propagate. The original wheat shows a similarly spectacular ability compared with today's completely overbred varieties, and the co-components are of much higher value, too. Original wheat can be harvested after four to eight weeks already (the norm is seven months). Just imagine the possibilities for countries suffering from famines.

What I find particularly interesting is the incredible memory of Nature. Theoretically, Nature would just have to play around with the natural electrostatic fields (as they appear after thunderstorms, for instance), to render all our breeding efforts obsolete. Even the number of chromosomes isn't taboo, as the Ciba-Geigy experiments have shown. The experiment was also done with trout roe, and here, too, a much more resistant original form was created.

Another smasher is the reviving of spores after 200 million years. The samples were taken at a depth of 140 metres from 200 million years-old strata in salt-works on the Rhine. Up until now, all attempts at reviving failed. But in an electrostatic field, the attempt was successful. Should Nature ever deem it necessary to revive the dinosaurs or to have healthier human beings on Earth, she apparently has the means to do so. For Nature, extinct for now does not mean extinct forever. There is hope that one day the planet will recover from many illnesses caused by humans.

AND apparently Nature has already started with such genetic corrections, for - as US researcher Gregg Braden maintains - everywhere on Earth and seemingly without plan babies are born with different genetics. Those children are practically immune against all the illnesses of our time!! Information about Gregg Braden's work (his book *Awakening to Zero Point*, for instance) at LL Productions, PO Box 3010, Bellevue, WA 98009.

For some time the text of the patent papers by Ciba-Geigy could be found on the internet, and many youngsters now play around with the field, as the set-up of the experiment is really very simple. Mother's tulips in the garden suddenly had thorns just like the rose bush. Apparently, a long time ago, tulips also did have thorns that modern gardeners, with much toil probably, bred away.
